                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence ampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                     BP; 219 A; 256 C; 248 G; 237 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                       Sequence 972 BP; 221 A; 250 C; 268 G; 231 T; 2 other;

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BP; 224 A; 247 C; 243 G; 213 T; 5 other;

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying olnes that may be generate and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1102 BP; 294 A; 283 C; 258 G; 265 T; 2 other;

/note="Organ: Colon_ins; Vector: puc18; Site_1: Smal; Site_2: Smal: A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="Organ: nervous_tumor; Vector: puc18; Site_1: SmaI; Site_2: SmaI; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. double-stranded cDNA was size selected, ligated to Bco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA was kindly provided by Dr. Minoru Ko (Mayne State University)."

/Anote-Trade Corner and pawplo; Site_1: Not1; Site_2: EcoRI; 1st strand cDNA was primed with oligo(d717 on 50 mg of DNASe-treated, total cellular RNA obtained from 5,000-10 000 microdissected prenceplastic cells histologically-determined to be prostatic intrapplithelial neoplasta 2 (PIN2) cells. Obuble-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the CDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pamplo by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AAT63580 standard; DNA; 32 BP AAT63580; AAT63580/c RESULT

(first entry) 01-JUL-1997 

PCR primer used in CD59 minigene No. 1 construction.

Xenotransplantation; organ transplant; transgenic animal; transgenic pig; transgenic mouse; antibody mediated rejection; thyperacute rejection: ODS; complement inhibitor; primer; PCR; polymerase chain reaction; minigene; ss.

Synthetic.

                                                                                                       A sense primer (AAT63579) and antisense primer (AAT63580) were designed to amplify a 1033 bp sequence of the 3' flanking region of the human CD59 gene, with the introduction of a 5' SacI site and 3' XhoI site. The PCR product was joined to CD59 cDMA contg. exons 3 and 4 plus 667 bp of 3' untranslated region (see also AAT63577-78)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  serum albumin; HA; antiinflammatory; immunosuppressive; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to albumin fusion proteins, which comprise
Transgenic animals expressing antigen reducing enzyme and complement inhibitor - used for production of materials suitable for human transplantation having a reduced risk of rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Albumin fusion proteins comprising a therapeutic protein and albumin, useful in the treating immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction) and hyperproliferative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                            to produce a CD59 minigene. This minigene was shown to retain biological function when expressed in transgenic pigs and mice. Expression of a complement inhibitor such as CD59 on endothelial
                                                                                                                                                                                                                                                  cells of transgenic animals can provide materials suitable for transplantation to humans, suppressing complement activation and
                                                                                                                                                                                                                                                                                                                                                                                                                 ;
                                                                                                                                                                                                                                                                                                                                                                                Length 32;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oligonucleotide #2 used to construct a HA fusion sequence.

            In the treatment, prevention, diagnosis, and/or detection of diseases/disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukemia), renal disorders (e.g. childhood acute myeloid leukemia), arrhythmias), respiratory disorders (e.g. non-allergic finitiis), neurological diseases (e.g. Lizheimer's disease), endocrine disorders (e.g. pheocytochroma), reproductive system disorders (e.g. syphilis), infectious diseases (e.g. measles), gastrointestinal disorders (e.g. inrealle bowel syndrome) and wound healing. In the present invention, human serum albumin (HA, see AAM52567) was used to generate fusion
  therapeutic protein and albumin. The albumin fusion proteins are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to albumin fusion proteins comprising therapeutic

protein and human albumin (HA). The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (transplant rejection); blood related disorders (myocardial infarction); hyperproliferative disorders (childhood acute myeloid leukaemia); renal disorder (glomerulonephritis); cardiovascular disorders (arrhythmias); respiratory disorders (non-allergic rhinitis); neurological diseases (Alzheimer's disorders (applinis); infections diseases (measles); gastrointestinal disorders (syphilis); infections diseases (measles); gastrointestinal disorders (srphilis); infections diseases (measles); gastrointestinal disorders (irritable bowel syndrome) and wound healing. The albumin fusion proteins are also used in the treatment of metastatic renal cell carcinoma, metastatic melanomma, malignant melanoma and HIV (human immunodeficiency virus) infection. Nucleic acid encoding albumin fusion protein is used for engineering the Xho and Cla I restriction sites into the DNA encoding HA protein in pepc0006 plasmid.

Charter The present sequence shown in sequence listing of the specification continued an ucleotide base at its 3' end.

                                                                                                The invention relates to albumin fusion proteins comprising therapeutic protein and human albumin (HA). Therapeutic protein fused to albumin have an extended shelf-life. The albumin fusion proteins are useful in the treatment, prevention, diagnosis and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukaemia), renal disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. arrhythmias), respiratory disorders (e.g. non-allergic rhinitis), neurological diseases (e.g. Alzheimer's disease), endocrine disorders (e.g. phocytochroma), reproductive system disorders (e.g. syphilis), infectious diseases (e.g. massles), gastrointestinal disorders (e.g. irritable bowel syndrome) and wound healing. Nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   renal cell carcinoma; cardiovascular disorder, antimicrobial; vulnerary; arrhythmia; respiratory disorder; non-allergic rhinitis; antileukaemic; neurological disease; Alzheimer; si disease; endocrine disorder; measles; pheocytochroma; reproductive system disorder; neuroprotective; syphilis; infectious disease; gastrointestinal disorder; wound healing; nootropic; irriteable bowed syndrome; HIV; human immunodeficiency virus infection; cytostatic; antiinflammatory; gene therapy; immunosuppressive; cardiant; antianthritic; antirheumatic; renal disorder; melanoma; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                    albumin fusion protein is used in gene therapy. The present sequence is a PCR primer used for engineering the Xno and Cla I restriction sites into the DNA encoding HA protein in pPPC0006 plasmid. Note: This sequence SEQ.ID.NO.20 is stated to be similar to the

                                                                                                                                                                    corresponding netaces to disagnees. Therapeutic proteins fused to albumin or its fragments have an extended shelf-life. The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. childhood acute myeloid leukaemia, metastatic renal cell carcinoma, metastatic melanoma, renal cell carcinoma), renal disorders (e.g. childhood acute myeloid leukaemia, metastatic ranal cell carcinoma), renal disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. arrhythmias), respiratory disorders (e.g. non-allergic rhintis), neurological diseases (e.g. Alzheimer's diseases), endocrine disorders (e.g. pheocytochroma), reproductive system disorders (e.g. syphilis), infections diseases (e.g. measles), gastrointestinal disorders (e.g. infections diseases (e.g. measles), gastrointestinal disorders (e.g. infections diseases (e.g. measles), gastrointestinal disorders (e.g. infection and wound healing. Nucleic acids encoding albumin fusion protein is and wound healing the Arbo and Cla I restriction sites into the fusion leader sequence just 5' end of the DNA encoding the HA protein in pPPC0006 plasmid.

Note: This sequence SEQ.110 (No.20 is stated to be similar to the sequence shown in the sequence listing. However this sequence in the sequence listing. However this sequence in

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA

Dumas Milne Edwards J, Duclert A, Giordano J;

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures WPI; 2000-500381/45.

Claim 1; SEQ ID 35859; 71pp + CD-ROM; English

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. expression and secretion vectors.

The present invention describes plant polynucleotides encoding polypeptides involved in the production and modification of isoprenoids, such as terpenoid and steroid compounds. The polynucleotides are used in genome mapping, in physical mapping and in positional cloning of genes. The polynucleotides and polypeptides are useful in forestry and agriculture for manipulation of isoprenoid metabolism, in medicine for therapeutic effects, including direct application in diseased organisms or indirect application by transgenic organisms and in fermentation and chemical processing industries involving isoprenoids. In plant capplications, manipulating isoprenoid pathways or isoprenoid composition may, for example, affect plant development, pest resistance, and the value of extractives (e.g. pinene and myrcene). The ubiquitous and varied roles of isoprenoids make the polynucleotides attractive targets for blotechnical applications in a variety of fields. AAA69527 to AAA69509 and ABABB041 to ABABB143 represent Eucalyptus grandis and pluus AAA69690 and AAB18004 to AAB18143 represent Eucalyptus grandis and Pinus radiate polynucleotides and proteins used in the exemplification of the Sequence 315 BP; 77 A; 96 C; 90 G; 52 T; 0 other; invention present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antidiabetic; hypotensive; dermatological; immunosippressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORRX-associated disorder. The nucleic acids can be used to express ORRX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from RNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, astima, allegies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures –

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA ilbraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.

A plasmid containing the DNA sequence of PEPCase can be introduced into a monocotyledonous plant to enhance PEPCase activity. The transformed plant has a high ability to fix carbon dioxide under dry conditions. It can also increase corn productivity when introduced into a corn plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                   Phospho:enol:pyruvate carboxylase gene of a monocotyledonous CAM plant - used to transform plants so that they can fix carbon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

rhis sequence encodes a human secreted protein of the invention. The extended CDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative fingerprint identification techniques. Antibodies against the proteins encoded by the extended cDNAs are useful in identification of issue types or cell species, as well as identifying tissue specific soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary diseases or drug response. signal sequences from the cDNAs can be used in construction of secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in indagnosing and treating several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, and

7-transmembrane G-protein coupled protein receptors (TTM-GPCRs). The present sequence is one such murine 7TM-GPCR coding sequence. The present sequence was derived from hematopoietic stem cells. The present sequence and its corresponding protein are useful in the prevention, diagnosis and treatment of diseases associated with inappropriate 7TM-GPCR expression. TYM-GPCRs identify specific signalling molecules, to activate an effector-signalling cascade that triggers an intracellular response and eventually a biological effect.
                                                                                                                                                                                                                                                                                             DNA Sequences encoding 7-transmembrane G-protein coupled protein receptors characteristic of hematopoietic stem cells, useful for
